

ProITbridge

FUNCTIONAL REQUIREMENTS DOCUMENT (FRD)

Payment & Enrollment Automation Platform

A three-stage web application covering Sales Entry → Data Management Audit → Finance Review

Field	Detail
Document Title	Functional Requirements Document – ProITbridge Payment & Enrollment Automation Platform
Document Version	1.2 (Draft for Review)
Date	11 August 2026
Prepared For	ProITbridge Automation / Development Team
Requirement Owners	Sales Team (Mathiew, Kevin, Dinesh, Hari); Nandhiya (Data Management); Rajesh (Finance)
Source Inputs	1. ProITbridge Sales Automation Requirements (PDF) 2. Data Management Dashboard Requirements (PDF) 3. Finance requirements note from Rajesh
Changes in v1.2	v1.1 — added a single Super Admin role above all three dashboards (Section 2, Section 8.1, FR-SA-01 to FR-SA-20, BR-23 to BR-26). v1.2 — added Section 12 Security and Data Protection (FR-SEC-01 to FR-SEC-46) and Section 13 Payment Integrity and Reconciliation (FR-REC-01 to FR-REC-18, BR-27 to BR-30). Later sections renumbered.
Status	Pending stakeholder sign-off

19	Sign-off

1. Introduction

1.1 Purpose

This document defines the complete functional requirements for the ProITbridge Payment & Enrollment Automation Platform — a single internal web application, built for ProITbridge’s own use, that replaces the current manual, chat-and-spreadsheet based process for capturing enrollment payments, verifying them, and reporting them to Finance.

It is written to be handed directly to a development team as the build specification. Every requirement carries a unique ID (FR-xxx) so that build, test and sign-off can be traced back to the originating business need. This document specifies what the system must do; it does not contain a build estimate, quotation or commercial proposal, which are handled separately.

1.2 Business Problem

Today the enrollment payment journey is fragmented across three teams and multiple tools:

- Salespeople collect learner details and payment screenshots over WhatsApp/Teams and re-type them into messages and sheets.
- Fee calculation (base plan, combo pack, single-shot vs double-shot, concessions, GST) is done manually and is prone to error.
- Nandhiya receives payment records through chat, with no structured queue, no verification status and no history of who changed what.
- Rajesh has no reliable view of approved payments and must repeatedly chase the sales team to reconcile the month’s collection.
- There is no audit trail, so a disputed payment or a mismatched amount cannot be traced to a person, a time or a document.

1.3 Solution Summary

One web application with role-based logins and three purpose-built dashboards, connected by a single lead-and-payment record that flows through a two-level approval chain, with one Super Admin sitting above all three:

Stage	Owner	Dashboard	Responsibility
Stage 1 – Capture	Sales Team (4 individual logins)	Sales Dashboard	Create lead, capture learner details, auto-calculate fee, generate payment draft, upload payment screenshot, record Transaction ID, submit for audit.
Stage 2 – Audit (L1 Approval)	Nandhiya	Data Management Dashboard	Verify each payment against its proof, approve / request correction / reject, maintain full audit history.
Stage 3 – Review (L2 / Final)	Rajesh	Finance Dashboard	View only Nandhiya-approved payment statements, complete customer master data, and month-wise collection including course-holding and follow-up payments.
Oversight (across all three)	Super Admin (one nominated person)	Super Admin Console	Full visibility across all three stages, user and role management, Pricing Master, system configuration, and controlled override authority — every override reasoned, logged and reported

Stage	Owner	Dashboard	Responsibility
			to Rajesh.

Approval direction is one-way and gated: a payment record is not visible on Rajesh's Finance Dashboard until Nandhiya has marked it Approved. This is the core control the platform enforces.

1.4 Scope

1.4.1 In Scope

- Role-based authentication with individual logins for every user, across five roles including a single Super Admin.
- Sales Dashboard: lead management, learner basic-details capture, course/plan selection, automated pricing engine, concession handling, payment draft generation, payment capture with screenshot upload and OCR assist, 15-day payment automation, follow-up reminders.
- Data Management Dashboard: payment audit queue, payment-type views, audit status lifecycle, correction/rejection with mandatory reasons, complete field-level audit history.
- Finance Dashboard: approved payment statement, complete customer data view, course-holding and follow-up payment records, month-wise collection summary, exports.
- Super Admin Console: one nominated highest-authority login with visibility across all three dashboards, user and role management, Pricing Master, system configuration, controlled override authority and a separate activity log.
- Notifications and automated reminders (in-app and email; WhatsApp optional — see Section 17).
- System-wide audit trail and reporting/export capability.
- A full security and data-protection baseline covering access control, database security, payment-proof storage, application hardening, backup and recovery, monitoring and retention (Section 12).
- Payment integrity and reconciliation controls that prevent a mismatch being created and surface any drift the same day (Section 13).

1.4.2 Out of Scope (Phase 1)

- Payment gateway integration or automated bank reconciliation — payments are recorded from proof uploaded by the salesperson, not collected inside the application.
- Automatic GST filing, invoicing to statutory portals, or accounting-software (Tally/Zoho Books) integration.
- Learning Management System (LMS), batch scheduling, attendance or content delivery.
- Post-enrollment Operations workflows beyond receiving the consolidated handover record.
- Refund and cancellation processing (recommended for Phase 3 — see Q-06, Section 17).
- Native mobile applications (the web app will be responsive and mobile-usable).

1.5 Definitions and Abbreviations

Term	Meaning
Lead	A prospective learner record created by a salesperson, carrying all details, pricing and payments through the entire journey.
Payment Record	A single payment event (1st / 2nd / 3rd) attached to a lead, with its own amount,

Term	Meaning
	date, Transaction ID, proof and audit status.
Course Holding Amount	The 1st payment when the course has NOT yet started — indicates intent to enroll.
Course Starting Amount	The 1st payment when the course HAS started — marks official course start and triggers the 15-day rule.
Down Payment	The 2nd payment. Confirms commitment. Becomes the Final Payment if no 3rd payment is made.
Follow-up Payment	Rajesh's term for any payment after the first — covers Down Payment and Final Payment.
Final Payment	The payment that closes the balance to zero.
L1 Approval	First-level approval by Nandhiya on the Data Management Dashboard.
L2 / Finance View	Rajesh's review stage on the Finance Dashboard, fed only by L1-approved records.
Pricing Master	Admin-controlled table of all fees, combo rates, GST and effective dates — the single source of pricing truth.
Audit Status	Verification state of a payment record: Pending Audit / Approved / Correction Required / Rejected / Resubmitted.
OCR	Optical Character Recognition — used to read amount, date and Transaction ID from an uploaded payment screenshot.
RBAC	Role-Based Access Control.
SLA	Service Level Agreement — here, the expected turnaround time on an audit.

2. Stakeholders, Roles and Access

2.1 User Roles

Every user receives an individual login credential. Shared or team logins are explicitly not permitted — individual identity is what makes the audit trail meaningful.

#	Role	Users	Dashboard	Primary Purpose
1	Salesperson	Mathiew, Kevin, Dinesh, Hari (4 individual logins)	Sales Dashboard	Capture leads, generate payment drafts, record payments and proofs, manage follow-ups.
2	Sales Manager / Admin	To be nominated	Sales Dashboard (all-team view) + Admin	View all leads across the team, approve concessions above limit, manage Pricing Master and users.
3	Data Management Auditor	Nandhiya	Data Management Dashboard	L1 verification of every payment record against its proof.
4	Finance Reviewer	Rajesh	Finance Dashboard	Review approved payment statements, customer master data and monthly collection.
5	Super Admin	ONE nominated owner, separate from Sales, Data Management and Finance	Super Admin Console + read access to all three dashboards	The single highest-authority role. Full visibility across all three stages, user and role management, Pricing Master, system configuration, audit-log access and controlled override authority. See Section 8.
6	Operations (recipient)	Operations Team	Read-only handover view / notification	Receive the consolidated learner + payment handover record.

2.2 Role-Based Access Control Matrix

C = Create, R = Read, U = Update, D = Delete/Deactivate, A = Approve, – = No access

Function	Sales-person	Sales Manager	Nandhiya	Rajesh	Super Admin
Own leads	C R U	R U	R	R	R U †
All team leads	–	R U	R	R	R U †
Learner basic details	C R U	R U	R	R	R
Payment draft generation	C R	C R	R	R	R
Payment record entry + proof upload	C R U *	C R U	R	R	R

Function	Sales-person	Sales Manager	Nandhiya	Rajesh	Super Admin
Edit an approved payment amount / Txn ID	-	-	-	-	- ‡
Payment audit decision (L1)	-	-	A	-	-
Reverse / reopen an audit decision	-	-	-	-	A †
Finance payment statement	-	R	R	R	R
Complete customer data sheet	R (own)	R	R	R	R
Concession request	C R	C R A	-	R	R A †
Unlock a locked fee	-	A	-	-	A †
Pricing Master	-	R U	-	R	C R U D
User management and role assignment	-	-	-	-	C R U D
System configuration and templates	-	-	-	-	C R U D
Audit trail / history	R (own)	R	R	R	R (all) + export
Reports and exports	R (own)	R	R	R	R (all)

* A salesperson may edit a payment record only while its Audit Status is **Pending Audit** or **Correction Required**. Once Approved or Rejected the record is locked to that salesperson.

† Super Admin override actions always require a mandatory written reason and generate an immutable audit entry plus a notification to the affected role. They are exceptional actions, not routine ones.

‡ By deliberate design the Super Admin **cannot** directly edit a payment amount or Transaction ID. To correct an approved payment, the Super Admin reopens the audit decision and the record travels back through Sales and Nandhiya — so no financial figure can ever change without both of them seeing it.

Rajesh has read-only access by design. The Finance Dashboard is a reporting and reconciliation surface — it does not allow editing of payment data, which protects the integrity of the audited record. The Super Admin is held by a separate nominated person, so the individual who runs the system is not the individual who reviews the money.

3. End-to-End Workflow

3.1 The Master Flow

The following is the single journey every enrollment travels. Each arrow is a system-enforced transition, not a manual message.

Step	Actor	Action
1	Salesperson	Creates the lead and marks it Interested.
2	Salesperson	Captures learner Basic Details (name, DOB, address, email, mobile) — entered once, reused everywhere.
3	Salesperson	Selects Program + Plan (+ Combo, single-shot / double-shot). System auto-calculates the fee from the Pricing Master.
4	Salesperson / Manager	If a concession applies, raises it with reason. Above the configured limit it requires manager approval.
5	System	Generates the complete Payment Draft message on one click, including bank details and commencing date.
6	Learner	Pays and shares the payment screenshot with the Transaction ID.
7	Salesperson	Uploads the screenshot. OCR pre-fills amount, date and Transaction ID; salesperson confirms or corrects, then submits the payment record.
8	System	Payment record enters the Data Management audit queue with status Pending Audit. Balance is recalculated on the lead.
9	Nandhiya (L1)	Opens the record, compares entered values to the proof, and decides: Approve / Correction Required / Reject. Reason is mandatory for the last two.
10	Salesperson	If Correction Required — fixes the record and resubmits (status Resubmitted); returns to step 9.
11	System	On Approve — the complete payment statement is published to Rajesh's Finance Dashboard, and the customer master row is updated.
12	Rajesh	Reviews the approved statement, customer data, and month-to-date collection including course-holding and follow-up payments. Exports as needed.
13	System	When the balance reaches zero, marks the lead Fully Paid and prepares the consolidated Operations Handover record.
14	System	If the course has started and the Down Payment is not received within 15 days, auto-transfers the lead to Operations and alerts all three stages.

3.2 Approval Gate Rules

1. A payment record submitted by Sales is invisible to Finance until Nandhiya approves it. There is no bypass.
2. Nandhiya audits at the payment level, not the lead level. A lead can have Payment 1 approved while Payment 2 is still pending audit.

3. Rejected payments never reach Finance and are excluded from all collection totals, but remain fully visible in the audit history.
4. A Correction Required record returns to the originating salesperson only — it is not reassigned.
5. Every state change stamps the actor, the timestamp, the previous value and the new value.

3.3 Payment Structure

3.3.1 Course NOT Started

Payment	Term	Rule
1st Payment	Course Holding Amount	Indicates intent to enroll before the course starts.
2nd Payment	Down Payment	Confirms commitment. If no 3rd payment is made, this becomes the Final Payment.
3rd Payment	Final Payment	Completes the full payment cycle.

No time-bound restriction applies while the course has not started.

3.3.2 Course STARTED

Payment	Term	Rule
1st Payment	Course Starting Amount	Marks the official start of the course. Starts the 15-day clock.
2nd Payment	Down Payment	Must be collected within 15 days of the 1st payment.
3rd Payment	Final Payment	Completes the payment cycle.

3.4 Lead Status Pipeline

The lead status is system-driven; a salesperson cannot set it arbitrarily. It advances automatically as data and payments arrive.

#	Status	Set When
1	New Lead	Lead is created.
2	Interested	Salesperson marks the lead as qualified/interested.
3	Basic Details Pending	Lead is interested but the basic-details form is incomplete.
4	Basic Details Received	All mandatory basic-details fields pass validation.
5	Payment Draft Generated	Payment draft has been generated for the lead.
6	Payment Pending	Draft shared, no payment recorded yet.
7	Course Holding / Starting Amount Received	Payment 1 recorded and approved.
8	Down Payment Pending	Payment 1 approved, balance outstanding.
9	Down Payment Received	Payment 2 recorded and approved.

#	Status	Set When
10	Final Payment Pending	Payment 2 approved, balance still outstanding.
11	Fully Paid	Total approved received = final approved fee (balance zero).
12	Enrollment Completed	Fully paid + all mandatory records complete.
13	Operations Handover	Consolidated record sent to Operations (manually or by the Day-15 rule).

4. Module 1 – Authentication and User Management

ID	Requirement	Priority
FR-AUTH-01	The system shall provide individual login credentials (unique username/email + password) for every user. Shared logins are not permitted.	Must
FR-AUTH-02	The system shall authenticate users and assign them to exactly one primary role: Salesperson, Sales Manager, Data Management Auditor, Finance Reviewer, or Super Admin.	Must
FR-AUTH-03	On successful login the system shall route the user directly to the dashboard associated with their role. A user shall never see another role's dashboard.	Must
FR-AUTH-04	The system shall enforce a password policy: minimum 8 characters, at least one uppercase, one number and one special character; forced change on first login.	Must
FR-AUTH-05	The system shall provide a self-service "Forgot Password" flow using a time-limited email reset link (valid 30 minutes, single use).	Must
FR-AUTH-06	The system shall automatically log a user out after 30 minutes of inactivity.	Must
FR-AUTH-07	The system shall lock an account for 15 minutes after 5 consecutive failed login attempts and notify the Administrator.	Should
FR-AUTH-08	The Super Admin shall be able to create, edit, deactivate and reactivate users, and reassign roles. Users shall be deactivated, never hard-deleted, so history is preserved.	Must
FR-AUTH-09	The system shall record every login, logout and failed login attempt with the user, IP address and timestamp.	Must
FR-AUTH-10	The system shall enforce two-factor authentication (email OTP) on the Super Admin role, and shall support it for the Data Management and Finance roles.	Must
FR-AUTH-11	There shall be exactly one active Super Admin role in the system. A second Super Admin credential may exist only as a documented break-glass backup, and its use shall raise an alert to the primary Super Admin and to Rajesh.	Must

5. Module 2 – Sales Dashboard

Users: Mathiew, Kevin, Dinesh, Hari (individual logins) and the Sales Manager / Admin (all-team view).

5.1 Sales Dashboard Home

ID	Requirement	Priority
FR-SAL-01	The system shall show each salesperson a personal dashboard containing only their own leads by default.	Must
FR-SAL-02	The dashboard shall display summary tiles: Total Leads, Basic Details Pending, Payment Pending, Down Payment Pending, 15-Day Deadline Approaching, Fully Paid, Corrections Required, and Total Collected (this month).	Must
FR-SAL-03	The dashboard shall display an actionable “My Pending Actions” list ordered by urgency (Day-15 deadlines first, then corrections returned by Nandhiya, then payment follow-ups).	Must
FR-SAL-04	The dashboard shall provide a searchable, filterable lead list. Filters: status, program, plan, payment status, audit status, commencing date range, lead source, date created.	Must
FR-SAL-05	The Sales Manager / Admin shall be able to view all leads, payments, balances, follow-ups, commencing dates and Operations handovers across all four salespeople, with a salesperson filter.	Must
FR-SAL-06	The dashboard shall show a per-salesperson performance strip: leads created, conversions, amount collected, and pending balance for the selected period.	Should

5.2 Lead Creation and Basic Details

ID	Requirement	Priority
FR-SAL-07	A salesperson shall be able to create a new lead or select an existing lead to continue work on it.	Must
FR-SAL-08	The system shall capture the Basic Details form with the following mandatory fields: Full Name, Date of Birth, Full Address, Door No., Street, District, State, Pincode, Email ID, Mobile No.	Must
FR-SAL-09	The system shall validate: Email in valid format; Mobile as 10 digits (with optional country code); Pincode as 6 digits; DOB as a valid past date. On any validation failure the system shall display: “The details must be the same in all places. Please enter the information correctly.”	Must
FR-SAL-10	The system shall detect and warn on a duplicate lead when the same mobile number or email already exists, showing the existing lead and its owner, and shall prevent the creation of a duplicate active enrollment.	Must
FR-SAL-11	Basic details shall be entered once and automatically reused in the payment draft, the audit record, the Finance customer data view and the Operations handover — no re-typing anywhere.	Must
FR-SAL-12	The system shall capture Lead Source and free-text Remarks against each lead.	Should

ID	Requirement	Priority
FR-SAL-13	The system shall not permit generation of a payment draft until all mandatory basic-details fields are complete and valid.	Must

5.3 Course and Plan Selection

ID	Requirement	Priority
FR-SAL-14	The system shall offer Program selection: Data Analyst Program; Advanced Data Science & AI Program; Agentic AI + GenAI Program; Combo Pack – All Three Programs.	Must
FR-SAL-15	The system shall offer Plan selection: Advanced (Group Mentoring) or Premium (One-on-One Mentorship).	Must
FR-SAL-16	When Combo Pack is selected, the system shall additionally require the payment mode: Single Shot or Double Shot, and apply the corresponding combo price.	Must
FR-SAL-17	The system shall provide a Commencing Date selector. The selected date shall automatically appear in the payment draft, the enrollment record and the Operations handover.	Must
FR-SAL-18	The system shall capture whether the course has already started at the time of the first payment, as this determines the payment terminology and the 15-day rule. Where a Commencing Date is set, this shall be derived automatically and shown for confirmation.	Must
FR-SAL-19	The system shall capture batch information where applicable, for inclusion in the Operations handover.	Should

5.4 Pricing Engine

The pricing engine is the heart of the Sales module. No salesperson should ever compute a fee by hand for a standard case.

5.4.1 Standard Brochure Pricing (all figures inclusive of 18% GST)

Program	Advanced Plan (Group Mentoring)	Premium Plan (One-on-One)
Data Analyst	₹24,999	₹74,999
Advanced Data Science & AI	₹29,999	₹79,999
Agentic AI + GenAI	₹34,999	₹89,999

5.4.2 Combo Pack Pricing (all three programs)

Plan	Double Shot	Single Shot
Advanced	₹34,999	₹31,999
Premium	₹89,999	₹84,999

Approximately 95% of leads are expected to choose the Combo Pack, so the combo path must be the fastest and most reliable route through the pricing engine — not an exception case.

ID	Requirement	Priority
FR-SAL-20	The system shall automatically calculate the applicable fee from the Program + Plan + (Combo mode) selection, reading rates from the Admin-controlled Pricing Master. Manual fee entry shall not be permitted for standard cases.	Must
FR-SAL-21	The system shall automatically calculate the Combo Pack fee, correctly distinguishing Single Shot from Double Shot for both Advanced and Premium plans.	Must
FR-SAL-22	The system shall display the fee breakdown on screen: Base Fee, GST component (18%), Standard Fee (inclusive), Concession Amount, and Final Approved Fee.	Must
FR-SAL-23	The system shall lock the fee against the lead once the payment draft is generated. Any subsequent change to the Pricing Master shall not retroactively alter existing leads.	Must
FR-SAL-24	Where a change to a locked fee is genuinely required, the system shall require a documented reason and a manager approval, and shall record the change in the audit trail with previous and new value.	Must

5.5 Special Leads, Concessions and Flexible Payments

ID	Requirement	Priority
FR-SAL-25	The system shall provide a Special Concession / Flexible Payment option on the lead.	Must

ID	Requirement	Priority
FR-SAL-26	The concession screen shall display and record: Standard Fee, Concession Amount (value or %), Final Approved Fee, Payment Schedule, Reason / Remarks (mandatory), and Approval Status.	Must
FR-SAL-27	The system shall apply a configurable concession threshold. Concessions at or below the threshold shall be auto-approved; concessions above the threshold shall require Manager / Admin approval before the payment draft can be generated.	Must
FR-SAL-28	The concession threshold shall be configurable per plan by the Administrator without code changes.	Must
FR-SAL-29	The Final Approved Fee shall be stored against the lead and shall flow automatically into the payment draft, the payment schedule, the balance calculation and every downstream dashboard.	Must
FR-SAL-30	The system shall clearly flag concession/special leads with a visual marker on the Sales, Data Management and Finance dashboards.	Should
FR-SAL-31	The system shall support a flexible custom payment schedule for special leads (number of installments, amount and expected date per installment).	Should

5.6 Automatic Payment Draft Generator

A single “Generate Payment Draft” action shall assemble the complete, ready-to-send enrollment message. The salesperson should never assemble this text manually.

ID	Requirement	Priority
FR-SAL-32	The system shall generate the complete payment draft on one click, containing: Enrollment Confirmation type (Regular / Special); Full Name; DOB; Full Address with Pincode; Email; Mobile; Program Name; Plan; Course Fee / Approved Fee; Commencing Date; Payment Schedule; company bank / payment details; and the instruction to share the payment screenshot with the Transaction ID.	Must
FR-SAL-33	The draft template and the company bank / payment details shall be maintained by the Administrator as configurable content, not hard-coded.	Must
FR-SAL-34	The system shall provide Copy to Clipboard, Download as PDF and Send by Email actions on the generated draft.	Must
FR-SAL-35	The system shall record that a draft was generated, by whom and when, and shall move the lead status to Payment Draft Generated.	Must
FR-SAL-36	The system shall support regenerating the draft after an approved change, retaining every previous version for audit.	Should
FR-SAL-37	The system shall support sending the draft to the learner's WhatsApp via a pre-filled wa.me link or approved Business API template.	Could

5.7 Payment Capture, Screenshot Upload and OCR Assist

This is the step Rajesh described as “the sales team drops the screenshot and it should pull the details.” The system extracts what it can, but a human confirms before the record leaves the salesperson’s hands.

Field	Requirement
Payment Number	System-assigned: 1 / 2 / 3.
Payment Type	System-derived: Course Holding / Course Starting / Down Payment / Final Payment (see Section 3.3).
Expected Amount	System-calculated from the Final Approved Fee and the payment schedule.
Received Amount	Entered / confirmed by the salesperson (OCR pre-filled).
Payment Date	Recorded — the actual date on the proof (OCR pre-filled), not the upload date.
Payment Method	Selected: UPI / Bank Transfer (NEFT/IMPS/RTGS) / Card / Cash / Other.
Transaction ID (UTR)	Mandatory. OCR pre-filled; must be unique across the system.
Payment Screenshot / Proof	Mandatory upload. JPG, PNG or PDF, maximum 10 MB.
Payment Status	Pending / Received / Verified.
Balance	Automatically calculated: Final Approved Fee – sum of approved received amounts.
Remarks	Optional free text from the salesperson.

ID	Requirement	Priority
FR-SAL-38	The system shall require a payment screenshot upload and a Transaction ID for every payment record. Neither shall be skippable.	Must
FR-SAL-39	On upload, the system shall run OCR on the screenshot and automatically pre-fill Received Amount, Payment Date, Transaction ID / UTR, payer name and payment method where detectable.	Must
FR-SAL-40	The system shall display OCR-extracted values alongside the uploaded image and shall require the salesperson to explicitly confirm or correct each value before submission. Auto-extracted values shall never be submitted unconfirmed.	Must
FR-SAL-41	Each OCR-extracted field shall carry a confidence indicator; low-confidence fields shall be visually flagged for mandatory manual review.	Should
FR-SAL-42	The system shall record, for every field, whether the final value was OCR-extracted-and-accepted or manually overridden, and shall retain the original OCR output for audit.	Must
FR-SAL-43	The system shall reject a duplicate Transaction ID and display which lead and payment already uses it.	Must
FR-SAL-44	The system shall warn (not block) when the Received Amount differs from the Expected Amount, requiring a reason to be recorded before submission.	Must

ID	Requirement	Priority
FR-SAL-45	The system shall automatically recalculate the balance and advance the lead status after each approved payment.	Must
FR-SAL-46	The system shall store payment screenshots securely against the correct payment record, viewable as a zoomable preview from the Data Management and Finance dashboards.	Must
FR-SAL-47	Where OCR fails or the image is unreadable, the system shall permit full manual entry and shall flag the record as “Manual Entry – No OCR” for the auditor’s attention.	Must
FR-SAL-48	On submission the payment record shall be set to Pending Audit and placed in Nandhiya’s Data Management queue.	Must

Design note: OCR accuracy on Indian UPI and banking app screenshots varies by app and by screen resolution. The confirm-before-submit step (FR-SAL-40) is what makes this safe — it keeps the speed benefit of extraction while ensuring no unverified number ever reaches Nandhiya or Rajesh.

5.8 15-Day Payment Automation

This rule applies only when the course has already started (Section 3.3.2).

ID	Requirement	Priority
FR-SAL-49	When a Course Starting Amount is recorded and approved, the system shall automatically record the payment date and start a 15-day countdown for the Down Payment.	Must
FR-SAL-50	The system shall display the pending payment, the days remaining and the exact deadline date prominently on the salesperson's dashboard.	Must
FR-SAL-51	The system shall send automated follow-up reminders during the 15-day window on Day 3, Day 7, Day 10, Day 13 and Day 14 to the salesperson, and configurable reminders to the learner.	Must
FR-SAL-52	The system shall send a "deadline approaching" alert to the salesperson and Sales Manager on Day 13.	Must
FR-SAL-53	If the Down Payment is not received by the end of Day 15, the system shall automatically transfer the lead to the Operations Team, change the lead status accordingly, and notify the salesperson, the Sales Manager, Nandhiya and Rajesh.	Must
FR-SAL-54	Where only two payments are received in total, the system shall automatically treat Payment 2 as the Final Payment and close the payment cycle when the balance is zero.	Must
FR-SAL-55	The system shall apply no time-bound restriction to leads whose course has not started.	Must
FR-SAL-56	The 15-day period and the reminder schedule shall be configurable by the Administrator.	Should
FR-SAL-57	The Sales Manager shall be able to grant a documented extension to the 15-day deadline, with reason, recorded in the audit trail.	Should

5.9 Follow-ups and Notifications (Sales)

ID	Trigger	Notification	Recipients
FR-SAL-58	Basic details incomplete for 24 hours after lead marked Interested	Basic details pending reminder	Salesperson
FR-SAL-59	Payment draft generated but no payment recorded after 48 hours	Payment pending reminder	Salesperson
FR-SAL-60	Down Payment outstanding	Down Payment pending reminder	Salesperson
FR-SAL-61	Day 13 of the 15-day window	15-day deadline approaching	Salesperson, Sales Manager
FR-SAL-62	End of Day 15, Down Payment not received	Operations handover alert	Salesperson, Manager, Nandhiya, Rajesh, Operations
FR-SAL-63	Balance reaches zero	Full payment completed	Salesperson, Manager,

ID	Trigger	Notification	Recipients
			Nandhiya, Rajesh
FR-SAL-64	Nandhiya returns a record as Correction Required	Correction requested – action needed	Originating salesperson
FR-SAL-65	Nandhiya rejects a record	Payment rejected – reason attached	Originating salesperson, Sales Manager
FR-SAL-66	Salesperson creates a manual follow-up task with a due date	Follow-up due today	Salesperson

5.10 Operations Handover

ID	Requirement	Priority
FR-SAL-67	The system shall automatically prepare a single consolidated learner / payment record for handover, containing: Learner details (Full Name, DOB, Address, Email, Mobile); Course details (Program, Plan, Commencing Date, batch); Pricing (Standard Fee, Concession, Final Approved Fee); Payment details (Payments 1/2/3, Total Received, Balance, Transaction IDs, Screenshots); Sales details (Salesperson, Lead Source, Enrollment Date, Remarks).	Must
FR-SAL-68	Before handover the system shall validate that basic details, course, plan, fee, commencing date, payment information, Transaction ID and payment screenshot are all complete.	Must
FR-SAL-69	Where anything is missing, the system shall list exactly which fields are incomplete and shall block the handover.	Must
FR-SAL-70	Where everything is complete, the system shall display the confirmation message “Handover Successfully Sent.”	Must
FR-SAL-71	The consolidated handover record shall be simultaneously available to Nandhiya and Rajesh, and shall be exportable as PDF.	Must

6. Module 3 – Data Management Dashboard (Nandhiya)

Single user: Nandhiya. This is the Level-1 approval gate. Nothing reaches Finance without passing through it.

6.1 Payment Data Received from Sales

ID	Requirement	Priority
FR-DM-01	The dashboard shall display every payment record submitted by the Sales team, across all four salespeople, in a single queue.	Must
FR-DM-02	Each payment record shall display: Lead Name, Mobile Number, Email ID, Lead Owner / Salesperson, Course / Program, Plan (Advanced / Premium), Payment Type (Course Holding / First Payment / Follow-up Payment), Payment Amount, Payment Date, Payment Method, and Payment Proof.	Must
FR-DM-03	The payment proof shall open as a zoomable, downloadable preview directly beside the entered values, so verification requires no window switching.	Must
FR-DM-04	The record view shall additionally show the Expected Amount, Total Received to date and outstanding Balance for the lead, so a payment is never audited without its context.	Must
FR-DM-05	The queue shall be sortable and filterable by salesperson, payment type, audit status, program, plan, payment date range and submission date range.	Must
FR-DM-06	The queue shall support free-text search on Lead Name, Mobile Number, Email ID and Transaction ID.	Must
FR-DM-07	Records flagged “Manual Entry – No OCR”, or where the received amount differs from the expected amount, shall be visually highlighted for closer scrutiny.	Should
FR-DM-08	New records shall appear in the queue in real time (or on a refresh interval of no more than 60 seconds) without requiring a re-login.	Must

6.2 Separate Payment-Type Dashboards

In addition to the combined queue, the system shall provide dedicated views per payment type, as requested.

ID	Requirement	Priority
FR-DM-09	The system shall provide a dedicated Course Holding Payment view.	Must
FR-DM-10	The system shall provide a dedicated First Payment view (Course Holding / Course Starting Amount).	Must
FR-DM-11	The system shall provide a dedicated Follow-up Payment view (Down Payment and Final Payment).	Must
FR-DM-12	Each payment-type view shall carry its own count, total value and pending-audit count, and shall use the same audit actions as the combined queue.	Must
FR-DM-13	Every view shall be exportable to Excel / CSV with the applied filters intact.	Must

6.3 Payment-Level Audit Status

Each payment record carries a dedicated Audit Status column showing its current verification stage.

Audit Status	Meaning	Comment Mandatory?	Visible to Rajesh?
Pending Audit	Submitted by Sales, not yet reviewed by Nandhiya.	No	No
Approved	Verified against the proof and accepted.	Optional	Yes
Correction Required	Returned to the salesperson to fix specific values.	Yes	No
Rejected	Payment not accepted (invalid, duplicate, or unverifiable proof).	Yes	No (visible in history only)
Resubmitted	Salesperson has corrected and resubmitted; awaiting re-audit.	No	No

ID	Requirement	Priority
FR-DM-14	Every payment record shall have an Audit Status field with the values: Pending Audit, Approved, Correction Required, Rejected, Resubmitted.	Must
FR-DM-15	Nandhiya shall be able to set the audit decision on each payment record individually.	Must
FR-DM-16	For any record marked Correction Required or Rejected, the system shall require a mandatory comment / reason before the decision can be saved.	Must
FR-DM-17	The system shall provide a configurable list of standard reason codes (e.g. Amount mismatch, Transaction ID incorrect, Proof unreadable, Duplicate payment, Wrong lead, Details mismatch) alongside the free-text comment.	Should
FR-DM-18	A Correction Required record shall be routed back to the originating salesperson with a notification containing the reason.	Must
FR-DM-19	When a salesperson resubmits a corrected record, its status shall become Resubmitted and it shall return to the top of Nandhiya's queue, with the previous and new values shown side by side.	Must
FR-DM-20	Only on Approved shall the payment be published to the Finance Dashboard and counted in collection totals.	Must
FR-DM-21	Nandhiya shall be able to approve multiple clean records in a single bulk action, with each record still individually logged.	Should
FR-DM-22	The system shall prevent a record from being approved if the payment proof is missing or the Transaction ID is blank.	Must
FR-DM-23	An approval decision shall be reversible only by the Super Admin, with a mandatory reason and a full audit-trail entry (see FR-SA-06 and FR-SA-07).	Must

6.4 Data Management Dashboard Overview

The landing view gives Nandhiya the state of the entire audit workload at a glance.

ID	Requirement	Priority
FR-DM-24	The dashboard shall display an overview with counts and total values for: New payments received for audit; Pending audits; Approved payments; Correction-required payments; Rejected payments; Resubmitted payments; and Payments pending for a long period.	Must
FR-DM-25	Each overview tile shall be clickable and shall open the corresponding filtered list.	Must
FR-DM-26	“Payments pending for a long period” shall be driven by a configurable ageing threshold (default: pending audit for more than 48 hours) and shall be visually escalated (amber beyond the threshold, red at double the threshold).	Must
FR-DM-27	The dashboard shall show a period selector (Today / This Week / This Month / Custom Range) applying to all tiles.	Must
FR-DM-28	The dashboard shall display a salesperson-wise breakdown of submissions and their audit outcomes, so recurring data-quality issues are visible.	Should
FR-DM-29	The dashboard shall display the total approved collection for the selected period, split by payment type.	Should

6.5 Complete Audit History

For every payment, the complete activity history shall be viewable as a chronological timeline. This is the record that settles any future dispute.

ID	The history shall capture	Priority
FR-DM-30	Who submitted the payment (user name and role).	Must
FR-DM-31	Date and time of submission.	Must
FR-DM-32	Who edited the payment.	Must
FR-DM-33	Date and time of every edit.	Must
FR-DM-34	Exactly what information was changed (field-level).	Must
FR-DM-35	Previous value and updated value for every changed field.	Must
FR-DM-36	Who audited the payment.	Must
FR-DM-37	Audit date and time.	Must
FR-DM-38	The audit decision taken.	Must
FR-DM-39	The approval / rejection decision and its outcome.	Must
FR-DM-40	Correction comments / reason text in full.	Must
FR-DM-41	Complete resubmission history, including every cycle where a record was returned and resubmitted.	Must
FR-DM-42	Every version of the uploaded payment proof, where a proof was replaced during	Must

ID	The history shall capture	Priority
	correction.	

ID	Requirement	Priority
FR-DM-43	The audit history shall be presented as a reverse-chronological timeline on the payment record, expandable to show field-level before/after values.	Must
FR-DM-44	The audit history shall be immutable — no user, including the Super Admin, shall be able to edit or delete a history entry.	Must
FR-DM-45	The audit history shall be exportable to PDF for any individual payment record, for dispute resolution.	Should

The audit history is the backbone of accountability across all three teams. It is what allows Rajesh to trust a number on his dashboard without asking anyone how it got there.

7. Module 4 – Finance Dashboard (Rajesh)

Single user: Rajesh. Read-only by design. This dashboard exists to answer three questions without a single follow-up message to the sales team: what has been paid, who paid it, and what is the month's total.

7.1 Daily Approved Payment Statement

Requirement source: “For every new record, once it is approved by Nandhiya, I need the complete payment statement to be available on my dashboard so I can review and track the records directly.”

ID	Requirement	Priority
FR-FIN-01	The system shall publish every payment record to the Finance Dashboard immediately and automatically upon Nandhiya marking it Approved. No manual forwarding step shall exist.	Must
FR-FIN-02	The Finance Dashboard shall present a daily payment statement view, defaulting to today's approved payments, with a date / date-range selector.	Must
FR-FIN-03	The complete payment statement for each record shall display: Learner Name, Mobile Number, Email ID, Program, Plan, Payment Type, Payment Number (1/2/3), Expected Amount, Received Amount, Payment Date, Payment Method, Transaction ID, Payment Proof, Total Received to Date, Balance, Salesperson, Approved By, Approval Date & Time, and Enrollment / Commencing Date.	Must
FR-FIN-04	The payment proof shall be viewable and downloadable directly from the Finance Dashboard.	Must
FR-FIN-05	The statement shall show a daily total, a period total and a count of records for the selected range.	Must
FR-FIN-06	Records that are Pending Audit, Correction Required, Rejected or Resubmitted shall not appear in the Finance payment statement or in any Finance total.	Must
FR-FIN-07	The system shall notify Rajesh of newly approved payments through a dashboard indicator and an optional daily digest email.	Should
FR-FIN-08	The payment statement shall be exportable to Excel / CSV and PDF with the applied filters intact.	Must
FR-FIN-09	Rajesh shall be able to view the complete audit history of any payment on his dashboard, in read-only form.	Must
FR-FIN-10	Rajesh shall be able to raise a Finance Query against any record, sent to Nandhiya and the salesperson, without altering the payment data.	Should

7.2 Complete Customer Data

Requirement source: “I need the data available on my dashboard in case any updates are missed in Teams. The sheet should include the customer’s name, mobile number, email ID, address, and program/course details so I can verify everything from my end.”

ID	Requirement	Priority
FR-FIN-11	The system shall provide a Complete Customer Data view on the Finance Dashboard — a master sheet of every enrolled customer, maintained automatically from the sales record so that it is never dependent on a Teams message being sent.	Must
FR-FIN-12	The customer data sheet shall contain, as a minimum: Customer Name, Mobile Number, Email ID, Full Address (Door No., Street, District, State, Pincode), Date of Birth, Program / Course, Plan (Advanced / Premium), Combo mode (Single / Double Shot), Commencing Date, Standard Fee, Concession, Final Approved Fee, Total Received, Balance, Payment Status, Enrollment Status, Salesperson and Enrollment Date.	Must
FR-FIN-13	The customer data sheet shall update automatically whenever the underlying lead or payment record changes, with a “last updated” timestamp shown per row.	Must
FR-FIN-14	The sheet shall be searchable by name, mobile, email and Transaction ID, and filterable by program, plan, salesperson, payment status, enrollment status and date range.	Must
FR-FIN-15	The sheet shall be exportable to Excel / CSV in a single click, in the same column order shown on screen.	Must
FR-FIN-16	Each row shall expand to the customer’s full payment history — every payment, its type, amount, date, Transaction ID, proof and audit outcome.	Must
FR-FIN-17	The sheet shall visually flag incomplete customer records (missing address, email or mobile) so Rajesh can have them corrected before the month closes.	Should
FR-FIN-18	The system shall allow Rajesh to configure which columns appear in his view and save that configuration.	Could

7.3 Course-Holding and Follow-up Payment Records

Requirement source: “I would also like the course-holding payment and follow-up payment records to be included, so I can directly check the payments received for the month without following up with the sales team repeatedly.”

ID	Requirement	Priority
FR-FIN-19	The Finance Dashboard shall provide dedicated views for Course-Holding Payments and Follow-up Payments (Down Payment and Final Payment), in addition to the combined statement.	Must
FR-FIN-20	The system shall provide a Monthly Collection Summary showing, for any selected month: total approved collection; split by payment type (Course Holding, Course Starting, Down Payment, Final Payment); split by program; split by plan; and split by salesperson.	Must
FR-FIN-21	The Monthly Collection Summary shall be viewable without any interaction with the	Must

ID	Requirement	Priority
	sales team — all figures shall derive solely from Nandhiya-approved records.	
FR-FIN-22	The system shall provide an Outstanding Balance report listing every learner with a balance greater than zero, showing the amount outstanding, the payment stage, days outstanding and the responsible salesperson.	Must
FR-FIN-23	The system shall provide a month-on-month collection trend and a payment-type mix visualisation.	Should
FR-FIN-24	The system shall provide a GST summary for the period, showing the base value and the GST component of approved collections.	Should
FR-FIN-25	Every Finance report shall be exportable to Excel / CSV and PDF.	Must
FR-FIN-26	Rajesh shall be able to schedule a daily and a monthly summary email to himself.	Could

7.4 Finance Dashboard Overview Tiles

Tile	Shows
Approved Today	Count and total value of payments approved today.
Collection This Month	Total approved collection month-to-date, with comparison to the previous month.
Course Holding Payments	Count and value for the selected period.
Follow-up Payments	Count and value of Down Payment + Final Payment for the period.
Fully Paid Enrollments	Count of learners with zero balance in the period.
Total Outstanding	Aggregate balance across all active enrollments.
New Customers	Count of new enrollments added in the period.
Records Awaiting Audit	Informational only — volume sitting with Nandhiya, so Rajesh knows what is still in the pipe.

8. Module 5 – Super Admin Console

One nominated person holds Super Admin. It is the only role that sees all three dashboards, and the only role that can override a decision taken by another role — but it deliberately cannot alter a financial figure directly.

8.1 Super Admin Scope and Authority

8.1.1 Complete Visibility

ID	Requirement	Priority
FR-SA-01	The Super Admin shall have read access to every screen of the Sales Dashboard, the Data Management Dashboard and the Finance Dashboard, without switching accounts.	Must
FR-SA-02	The Super Admin Console shall provide a consolidated system overview showing, in one view: total leads and their stage distribution; payments pending audit and their ageing; approved collection for the period; outstanding balance; 15-day deadlines approaching; and Operations handovers completed.	Must
FR-SA-03	The Super Admin shall be able to open any lead, enrollment or payment record and view its complete history and every version of its payment proof.	Must
FR-SA-04	The Super Admin Console shall display a workflow-health panel highlighting bottlenecks: records pending audit beyond the ageing threshold, salespeople with repeated correction-required outcomes, leads stalled at the same status beyond a configurable period, and failed notification deliveries.	Should
FR-SA-05	The Super Admin shall be able to run and export every report available to any other role, across all users and all periods.	Must

8.1.2 Override Authority (Controlled)

Every override below is an exceptional action. Each one requires a mandatory written reason, writes an immutable audit entry, and notifies the affected role.

ID	Requirement	Priority
FR-SA-06	The Super Admin shall be able to reverse or reopen an audit decision taken by Nandhiya (an Approved record back to Pending Audit, or a Rejected record back into the queue), subject to a mandatory reason.	Must
FR-SA-07	Where an approved payment is reversed, the system shall immediately withdraw it from the Finance Dashboard and from all collection totals, and shall notify Rajesh, Nandhiya and the originating salesperson of the withdrawal and its reason.	Must
FR-SA-08	The Super Admin shall NOT be able to directly edit a payment amount, payment date or Transaction ID on any record, whether approved or not. Correcting an approved payment shall only be possible by reopening the audit decision so the record travels back through Sales and Nandhiya.	Must
FR-SA-09	The Super Admin shall be able to unlock a locked fee on a lead, subject to a mandatory reason, after which the fee is recalculated and the payment draft must be regenerated.	Must
FR-SA-10	The Super Admin shall be able to reassign a lead from one salesperson to another,	Must

ID	Requirement	Priority
	subject to a mandatory reason, with both parties notified.	
FR-SA-11	The Super Admin shall be able to approve a concession that exceeds the configured threshold where the Sales Manager is unavailable, subject to a mandatory reason.	Must
FR-SA-12	The Super Admin shall be able to grant an extension to a 15-day Down Payment deadline, or reverse an automatic Operations transfer executed in error, subject to a mandatory reason.	Must
FR-SA-13	The Super Admin shall be able to act as a temporary L1 auditor when Nandhiya is unavailable. Any payment audited by the Super Admin shall be visibly marked “Audited by Super Admin (delegated)” on every dashboard and in the audit history.	Must
FR-SA-14	The system shall not permit the Super Admin to delete any lead, enrollment, payment, proof or audit entry. Records may only be deactivated or voided, with a reason, and shall remain visible in history.	Must
FR-SA-15	The system shall present a confirmation dialog stating the exact consequence of every override before it is committed.	Must

8.1.3 Accountability of the Super Admin

ID	Requirement	Priority
FR-SA-16	Every Super Admin action shall be recorded in a dedicated, separately viewable Super Admin Activity Log, in addition to the system-wide audit trail.	Must
FR-SA-17	The Super Admin Activity Log shall be visible to Rajesh in read-only form, so that the highest-privilege role remains reviewable by the business.	Must
FR-SA-18	The system shall send Rajesh an immediate notification whenever a Super Admin reverses an audit decision, unlocks a fee, approves a concession above threshold, or performs a delegated audit.	Must
FR-SA-19	The system shall produce a monthly Super Admin Override Summary listing every override, its reason, the affected record and the outcome.	Should
FR-SA-20	The Super Admin shall not be able to modify, disable or purge the audit trail, the Super Admin Activity Log, or the notifications sent to Rajesh under FR-SA-18.	Must

The design principle here is that a Super Admin can unblock any situation but cannot quietly change a number. Every path to correcting money runs back through Sales and Nandhiya, and every override is reported to Rajesh — so the most powerful account in the system is also the most closely watched.

8.2 Pricing Master

Pricing must be configurable by the Super Admin so that future price changes never require redevelopment.

Field	Description
Course / Program	The program the rate applies to.
Advanced Fee	Group Mentoring plan fee.
Premium Fee	One-on-One Mentorship plan fee.
Single-Shot Fee	Combo fee when paid in a single shot.
Double-Shot Fee	Combo fee when paid in two shots.
Combo Fee	All-three-programs combo rate.
Discount / Concession	Standing discount and the approval threshold.
GST	Applicable GST percentage (currently 18%).
Effective Date	The date from which the rate applies.
Special Pricing	Named special rates for campaigns or partner leads.

ID	Requirement	Priority
FR-ADM-01	The Super Admin shall be able to create, edit and deactivate pricing entries covering all fields in Section 8.2, without any code change or deployment.	Must
FR-ADM-02	Pricing entries shall be effective-dated. The system shall apply the rate that is effective on the date the lead's fee is locked.	Must
FR-ADM-03	A change to the Pricing Master shall never retroactively alter the fee on a lead whose payment draft has already been generated.	Must
FR-ADM-04	Every Pricing Master change shall be recorded in the audit trail with the user, timestamp, previous value and new value.	Must
FR-ADM-05	The Super Admin shall be able to configure the concession approval threshold per plan.	Must
FR-ADM-06	The Super Admin shall be able to maintain the payment-draft template and the company bank / payment details as editable content.	Must
FR-ADM-07	The Super Admin shall be able to configure the 15-day period, the reminder schedule and the audit-ageing threshold.	Must
FR-ADM-08	The Super Admin shall be able to add or retire Programs and Plans without a code change.	Should
FR-ADM-09	The Super Admin shall be able to maintain the standard audit reason-code list.	Should
FR-ADM-10	The Super Admin shall have access to a system-wide audit log with filters by user, entity, action type and date range, and shall be able to export it.	Must

8.3 System-Wide Audit Trail

Every important action shall record the user, the action and the timestamp. At a minimum the following are auditable events:

- Lead created, edited or reassigned.
- Basic details entered or changed (field-level before/after).
- Course, plan or combo mode changed.
- Fee calculated, locked or overridden.
- Concession requested, approved or rejected.
- Payment draft generated or regenerated.
- Payment record created, edited or resubmitted.
- Payment screenshot uploaded or replaced.
- OCR extraction performed, and each field accepted or overridden.
- Payment audited — approved, correction required, rejected.
- Audit decision reversed by the Administrator.
- Lead transferred to Operations (manual or automatic).
- Pricing Master or system configuration changed.
- Any Super Admin override — audit reversal, fee unlock, lead reassignment, concession approval, deadline extension or delegated audit.
- User created, deactivated or role-changed.
- Login, logout, failed login and data export.

ID	Requirement	Priority
FR-AUD-01	The system shall write an immutable audit entry for every event listed in Section 8.3, capturing user, role, action, entity, entity ID, timestamp, previous value and new value.	Must
FR-AUD-02	Audit entries shall not be editable or deletable by any user, including the Super Admin.	Must
FR-AUD-03	Audit entries shall be retained for a minimum of 7 years.	Must
FR-AUD-04	The audit trail shall be searchable and exportable by authorised users.	Must
FR-AUD-05	The system shall log every data export with the user, the report, the filters applied and the record count.	Should

9. Consolidated Business Rules

These rules are binding on the implementation and shall be individually testable at UAT.

#	Business Rule
BR-01	No manual fee calculation for standard cases — the pricing engine is the only source of a standard fee.
BR-02	Basic learner details are entered once and reused everywhere; no screen requires re-typing them.
BR-03	Course, plan and combo-mode selection automatically determine the applicable fee.
BR-04	Special concessions must be separately identified, reasoned, and approved where they exceed the configured threshold.
BR-05	Payment screenshots and Transaction IDs must be stored against the correct payment record; both are mandatory.
BR-06	Transaction IDs must be unique across the entire system.
BR-07	If only two payments are received, Payment 2 becomes the Final Payment.
BR-08	Course-not-started payments carry no 15-day restriction.
BR-09	After the course starts, the Down Payment must be collected within 15 days of the Course Starting Amount.
BR-10	If the Down Payment is not received within 15 days, the lead is automatically transferred to Operations.
BR-11	Fully paid learners must be clearly and unambiguously identified.
BR-12	Operations must receive one consolidated learner / payment record, never fragments.
BR-13	Pricing must be configurable from the Admin Pricing Master.
BR-14	Every important action must have an audit trail entry.
BR-15	A payment record reaches Finance only after Nandhiya approves it — there is no bypass.
BR-16	A comment / reason is mandatory for every Correction Required and every Rejected decision.
BR-17	Rejected payments are excluded from all collection totals but remain permanently visible in the audit history.
BR-18	The Finance Dashboard is read-only; payment data cannot be altered from it.
BR-19	A locked fee can only be changed with a documented reason and manager approval.
BR-20	OCR-extracted values must be human-confirmed before a payment record is submitted.
BR-21	Users are deactivated, never deleted, so historical attribution is never lost.
BR-22	Balance = Final Approved Fee – sum of approved received amounts. Pending or rejected payments never reduce the balance.
BR-23	There is exactly one Super Admin. It is held by a nominated person outside Sales, Data Management and Finance.
BR-24	The Super Admin can reverse a decision but can never directly edit a payment amount, payment date or Transaction ID — corrections always travel back through Sales and Nandhiya.

#	Business Rule
BR-25	Every Super Admin override requires a written reason, is logged immutably, and is reported to Rajesh.
BR-26	No role, including the Super Admin, can delete a lead, payment, proof or audit entry. Records are voided or deactivated, never removed.
BR-27	A payment cannot be approved unless Nandhiya explicitly confirms the amount, date and Transaction ID against the uploaded proof.
BR-28	Totals and balances are always computed server-side from the individual approved payment records — never stored as a standalone editable figure.
BR-29	Money is stored and computed as exact decimal, never floating point, with one consistent rounding rule across the whole system.
BR-30	Any enrollment where approved payments plus balance does not equal the final approved fee is raised as a daily exception to the Super Admin and Rajesh.

10. Indicative Data Model

The following entities describe the minimum structure required. The single most important design principle is that all three dashboards read from the same lead-and-payment record — there is no copying of data between teams.

Entity	Key Attributes	Relationships
User	user_id, name, email, mobile, password_hash, role, status, two_fa_enabled, created_at, last_login	Owns Leads; performs Audits
Lead	lead_id, full_name, dob, door_no, street, address, district, state, pincode, email, mobile, lead_source, status, salesperson_id, remarks, created_at	1 Lead → 1 Enrollment → many Payments
Enrollment	enrollment_id, lead_id, program, plan, combo_mode, commencing_date, batch, course_started_flag, standard_fee, concession_amount, concession_reason, concession_status, final_approved_fee, balance, enrollment_status	Belongs to Lead
Payment	payment_id, enrollment_id, payment_number, payment_type, expected_amount, received_amount, payment_date, payment_method, transaction_id (unique), proof_file_id, payment_status, audit_status, submitted_by, submitted_at, audited_by, audited_at, audit_reason_code, audit_comment	Belongs to Enrollment
PaymentProof	proof_file_id, payment_id, file_path, file_type, file_size, uploaded_by, uploaded_at, version, ocr_raw_output	Belongs to Payment; versioned
PricingMaster	pricing_id, program, plan, advanced_fee, premium_fee, single_shot_fee, double_shot_fee, combo_fee, discount, gst_percent, effective_from, effective_to, special_pricing_flag, status	Referenced by Enrollment at fee-lock time
PaymentDraft	draft_id, enrollment_id, version, draft_content, generated_by, generated_at	Belongs to Enrollment
AuditTrail	audit_id, entity_type, entity_id, action, field_name, old_value, new_value, performed_by, performed_at, ip_address	Immutable; references any entity
SuperAdminActivity	activity_id, super_admin_id, override_type, entity_type, entity_id, reason_text, previous_state, new_state, performed_at, notified_to	Immutable; read-only to Rajesh
Notification	notification_id, recipient_id, type, channel, subject, body, related_entity, status, scheduled_at, sent_at, read_at	Sent to Users
FollowUpTask	task_id, lead_id, assigned_to, due_date, description, status, completed_at	Belongs to Lead
OperationsHandover	handover_id, enrollment_id, handover_type (manual / auto-day15), validated_flag, handover_date, generated_by	Belongs to Enrollment

11. Non-Functional Requirements

ID	Category	Requirement
NFR-01	Performance	Any dashboard or list view shall load within 3 seconds for up to 10,000 lead records.
NFR-02	Performance	OCR extraction on an uploaded screenshot shall complete within 10 seconds; where it takes longer, the salesperson shall be able to continue with manual entry.
NFR-03	Scalability	The system shall support at least 25 concurrent users and 50,000 payment records without redesign.
NFR-04	Availability	Target uptime of 99.5% during business hours (09:00–21:00 IST).
NFR-05	Security	All traffic shall be over HTTPS/TLS 1.2 or higher. Passwords shall be stored using a strong one-way hash (bcrypt or Argon2).
NFR-06	Security	Payment proofs shall be stored in private object storage, accessible only through authenticated, time-limited signed URLs.
NFR-07	Security	Role-based access shall be enforced server-side on every request, not only in the user interface.
NFR-07a	Security	Super Admin sessions shall require two-factor authentication, shall time out after 15 minutes of inactivity rather than 30, and every Super Admin login shall be notified to Rajesh.
NFR-08	Data Protection	Learner personal data shall be handled in line with Indian data-protection expectations; personal data shall not be exposed in URLs or logs. Section 12 specifies this in full.
NFR-09	Backup	Automated daily database backup with a 30-day retention, and a documented, tested restore procedure. Section 12.5 specifies backup and recovery in full.
NFR-10	Usability	The interface shall be responsive and fully usable on a laptop and a mobile browser, since salespeople frequently work from a phone.
NFR-11	Usability	Every error message shall state what is wrong and what the user should do next.
NFR-12	Compatibility	The system shall support the current and previous major versions of Chrome, Edge and Safari.
NFR-13	Auditability	Audit records shall be retained for a minimum of 7 years and shall be exportable.
NFR-14	Localisation	All currency shall display in INR with Indian digit grouping; all dates shall display as DD-MMM-YYYY; all times shall be IST.
NFR-15	File Handling	Uploads shall be restricted to JPG, PNG and PDF, maximum 10 MB per file, with server-side type validation and virus scanning.
NFR-16	Maintainability	All business parameters (prices, thresholds, reminder schedules, templates) shall be configuration-driven, never hard-coded.

12. Security and Data Protection

This is an internal ProITbridge system. It is not a public product, it has no external customers and no self-service signup — every account is provisioned by the Super Admin. That closes off a whole class of risk, but it does not reduce the security obligation, because the data held here is the company's complete learner personal data and its entire enrollment revenue record.

Hosting has not yet been decided (see Q-11, Section 17). Every requirement in this section is written to hold true whether the system runs on cloud infrastructure or on a ProITbridge-owned server. Where the choice changes an obligation, that is stated explicitly.

12.1 Access Security

ID	Requirement	Priority
FR-SEC-01	The system shall have no public registration or self-service signup. Accounts shall be created only by the Super Admin.	Must
FR-SEC-02	Access control shall be deny-by-default and enforced server-side on every single request. Hiding a button in the interface shall never be the only control protecting a function or a record.	Must
FR-SEC-03	Every API request shall independently re-verify the caller's identity, role and ownership of the requested record. A valid session shall not by itself grant access to another user's data.	Must
FR-SEC-04	Passwords shall be stored using a strong, salted, one-way hash (bcrypt or Argon2). Passwords shall never be stored, logged or transmitted in readable form, and shall never be recoverable — only resettable.	Must
FR-SEC-05	Two-step verification (2FA) shall be mandatory at login for the Super Admin, Finance and Data Management roles, and shall be available for all other roles.	Must
FR-SEC-06	Sessions shall expire after 30 minutes of inactivity (15 minutes for the Super Admin) and shall be fully invalidated server-side on logout, on password change and on role change.	Must
FR-SEC-07	The system shall lock an account after 5 consecutive failed login attempts and shall apply rate limiting to login, password-reset and OTP endpoints to prevent brute-force and enumeration attacks.	Must
FR-SEC-08	When a user is deactivated, all their active sessions and tokens shall be revoked immediately.	Must
FR-SEC-09	The system shall support optional restriction of Super Admin and Finance access to approved office IP addresses or a company VPN.	Should

12.2 Database Security

The database holds the complete financial and personal-data record of the business. It is the single most valuable asset in this system.

ID	Requirement	Priority
FR-SEC-10	The database shall never be directly reachable from the public internet. It shall accept connections only from the application server, over a private network or a firewall-restricted path.	Must
FR-SEC-11	The application shall connect to the database using a dedicated least-privilege account. The application account shall not hold schema-alteration or user-administration rights.	Must
FR-SEC-12	Database credentials, API keys and encryption keys shall never appear in source code, configuration files committed to version control, or log output. They shall be held in environment variables or a secrets manager.	Must
FR-SEC-13	All database access shall use parameterised queries or an ORM. String-concatenated SQL shall not be permitted anywhere in the codebase.	Must
FR-SEC-14	All data shall be encrypted at rest using AES-256 (or equivalent), including database files, backups and uploaded payment proofs.	Must
FR-SEC-15	All data in transit shall use HTTPS/TLS 1.2 or higher, including the application-to-database connection where the two are not on the same private host.	Must
FR-SEC-16	Personal identifiers (mobile number, email, address) and Transaction IDs shall be stored in a manner that supports field-level encryption or tokenisation where the deployment requires it.	Should
FR-SEC-17	No developer or third party shall hold standing production database access. Any production access shall be time-limited, individually attributed, approved by the Super Admin, and logged.	Must
FR-SEC-18	Test and development environments shall never use real learner data. Production data copied downward shall be anonymised first.	Must
FR-SEC-19	The database shall enforce integrity at schema level: a unique constraint on Transaction ID, foreign-key constraints between lead, enrollment, payment and proof, and non-null constraints on every mandatory financial field.	Must

12.3 Payment Proof and File Security

ID	Requirement	Priority
FR-SEC-20	Payment proofs shall be stored in private storage that is not publicly browsable and not guessable by URL. Direct public links shall not exist.	Must
FR-SEC-21	Access to a payment proof shall be granted only through a short-lived signed URL issued after the requesting user's role and record access have been verified.	Must
FR-SEC-22	Uploads shall be restricted to JPG, PNG and PDF, validated server-side by actual file content and not by file extension, with a maximum size of 10 MB.	Must
FR-SEC-23	Every uploaded file shall be virus and malware scanned before it is stored and made viewable.	Must
FR-SEC-24	Uploaded files shall be stored under system-generated names. The original filename shall be retained as metadata only, and shall never be used as the storage path.	Must
FR-SEC-25	Every view, download and export of a payment proof shall be logged with the user, the record and the timestamp.	Must
FR-SEC-26	Where a proof is replaced during a correction cycle, the previous version shall be retained and shall remain viewable in the audit history. Proofs shall never be overwritten in place.	Must

12.4 Application Security

ID	Requirement	Priority
FR-SEC-27	The application shall be built and tested against the OWASP Top 10, covering at minimum injection, broken access control, cryptographic failures, security misconfiguration and vulnerable dependencies.	Must
FR-SEC-28	All input shall be validated and sanitised server-side. Client-side validation shall be treated as a convenience only, never as a control.	Must
FR-SEC-29	The system shall protect against cross-site scripting and cross-site request forgery on every state-changing operation.	Must
FR-SEC-30	Error messages shown to users shall never expose stack traces, database structure, file paths, query text or internal identifiers.	Must
FR-SEC-31	Personal data, payment amounts, Transaction IDs and authentication tokens shall never appear in URLs, browser history, referrer headers or application logs.	Must
FR-SEC-32	Third-party dependencies shall be version-pinned and scanned for known vulnerabilities before each release.	Must
FR-SEC-33	An independent security review or penetration test shall be completed and its findings closed before go-live with real learner data.	Must

12.5 Backup, Recovery and Continuity

ID	Requirement	Priority
FR-SEC-34	The database shall be backed up automatically at least once every 24 hours, with backups encrypted and stored separately from the primary system.	Must
FR-SEC-35	Payment proofs shall be included in the backup regime — a database backup alone is not a complete backup of this system.	Must
FR-SEC-36	Backups shall be retained for a minimum of 30 days, with a monthly backup retained for 12 months.	Must
FR-SEC-37	A full restore shall be tested at least once before go-live and thereafter every six months, with the test documented.	Must
FR-SEC-38	The system shall target a Recovery Point Objective of 24 hours and a Recovery Time Objective of 8 working hours.	Should
FR-SEC-39	Where the system is deployed on a ProITbridge-owned server, backup execution, off-site copy, operating-system patching, firewall management and physical access control become explicit ProITbridge responsibilities and shall be assigned to a named owner before go-live.	Must

12.6 Monitoring, Privacy and Retention

ID	Requirement	Priority
FR-SEC-40	The system shall maintain a security event log covering logins, failed logins, lockouts, password and role changes, permission-denied events, proof access and data exports.	Must
FR-SEC-41	The system shall alert the Super Admin on suspicious events: repeated failed logins, a login from an unrecognised location, bulk export of learner data, or use of the break-glass Super Admin credential.	Must
FR-SEC-42	Every export of learner or payment data shall be logged with the user, the report, the filters applied and the record count.	Must
FR-SEC-43	Learner personal data shall be collected and used only for enrollment and payment administration, and shall not be shared outside ProITbridge without a documented business reason.	Must
FR-SEC-44	Each role shall see only the personal data its function requires. Full address and date of birth shall be visible to Sales, Data Management, Finance and Super Admin, and shall not be exposed to any future role without an explicit decision.	Should
FR-SEC-45	Financial and audit records shall be retained for a minimum of 7 years. Where a learner record is closed, it shall be archived rather than deleted, so financial history remains intact.	Must
FR-SEC-46	The system shall document, at go-live, who holds each privileged credential, and this shall be reviewed whenever a team member joins or leaves.	Must

13. Payment Integrity and Reconciliation

A large volume of money passes through this system, and the figures must tally exactly — at the end of a day, a month and a year. This section defines the controls that make a mismatch impossible to create silently, rather than merely easy to spot afterwards.

The two-step verification chain — Sales captures, Nandhiya verifies against the proof, Rajesh reviews the approved result — is the primary control. The requirements below make sure that chain cannot be bypassed, and that the arithmetic behind it cannot drift.

13.1 Preventing a Mismatch

ID	Requirement	Priority
FR-REC-01	Transaction ID shall be unique across the entire system, enforced by a database-level unique constraint and not by application logic alone. A duplicate shall be blocked at submission, naming the lead and payment that already holds it.	Must
FR-REC-02	Nandhiya shall not be able to approve a payment without explicitly confirming that the Received Amount, Payment Date and Transaction ID match the uploaded proof. This confirmation shall be a deliberate action, recorded in the audit history.	Must
FR-REC-03	Where the Received Amount differs from the Expected Amount, the system shall block approval until the difference is either corrected or explicitly accepted with a written reason recorded against the record.	Must
FR-REC-04	The system shall block any payment that would take the total approved received amount above the Final Approved Fee. Over-collection shall require an explicit Super Admin override with a reason.	Must
FR-REC-05	The system shall detect a probable duplicate payment — the same lead, the same amount and the same payment date within a configurable window — and shall warn before submission and again before approval.	Must
FR-REC-06	Balance and all totals shall be calculated server-side from the stored approved payment records. A total shall never be accepted from the browser, and shall never be stored as a standalone editable figure that can drift from its components.	Must
FR-REC-07	All monetary values shall be stored and computed using an exact decimal type. Floating-point arithmetic shall not be used for money anywhere in the system.	Must
FR-REC-08	The system shall apply a single documented rounding rule to every monetary calculation, including GST components, and shall apply it consistently across the payment draft, the dashboards and every export.	Must
FR-REC-09	A payment record shall become immutable once approved. Any change thereafter shall be possible only by reopening the audit decision (FR-SA-06), which returns the record through Sales and Nandhiya.	Must
FR-REC-10	No payment record, proof or audit entry shall ever be deleted. A payment entered in error shall be voided with a mandatory reason, shall be excluded from all totals, and shall remain permanently visible in history.	Must

13.2 Detecting a Mismatch

Prevention is the first line; the controls below exist so that if anything ever does drift, it is surfaced the same day rather than discovered at year-end.

ID	Requirement	Priority
FR-REC-11	The system shall run an automated daily reconciliation check verifying that, for every active enrollment, the sum of approved payments plus the outstanding balance equals the Final Approved Fee.	Must
FR-REC-12	Any enrollment failing the daily reconciliation check shall be raised as an exception to the Super Admin and to Rajesh, naming the record and the nature of the discrepancy.	Must
FR-REC-13	The system shall verify that the collection total shown on the Finance Dashboard for any period equals the sum of the individual approved payment records in that period, and shall flag any variance.	Must
FR-REC-14	The system shall detect and report orphan records: a payment without a proof, a proof not linked to a payment, an approved payment with no audit entry, or a payment whose lead has been voided.	Must
FR-REC-15	The system shall produce a month-end reconciliation statement showing opening outstanding, payments approved in the period by type, voids and reversals, and closing outstanding — all figures reconciling to the individual records behind them.	Must
FR-REC-16	Every change to a balance shall generate an audit entry recording what caused it, so that any figure on any dashboard can be traced back to the specific payments that produced it.	Must
FR-REC-17	The system shall report all payments approved outside normal working hours, all Super Admin overrides affecting money, and all voided payments, in a single monthly exceptions report to Rajesh.	Should
FR-REC-18	The system shall never silently auto-adjust a monetary figure. Any correction shall be an explicit, attributed, reasoned action by a named user.	Must

Read together, FR-REC-01 to FR-REC-18 mean that a payment figure in this system can only be created by a salesperson, can only be confirmed by Nandhiya against a proof, can only be changed by sending it back through both of them, and can never be deleted. That is what makes the month tally without anyone having to chase the sales team.

14. Suggested Technical Approach

This section is indicative, not prescriptive. The development team may substitute equivalent technologies, provided every functional and non-functional requirement in this document is met.

Layer	Suggested Option	Rationale
Frontend	React with a component library (Material UI / Ant Design)	Fast dashboard development, strong table and filter components, responsive out of the box.
Backend	Node.js (NestJS/Express) or Python (Django REST / FastAPI)	Either is well suited to a role-based workflow API; choose by team familiarity.
Database	PostgreSQL or MySQL	Relational integrity matters here — leads, payments and audit entries are strongly related.
File Storage	AWS S3 / Azure Blob / Google Cloud Storage with private ACLs	Payment proofs must not be publicly reachable; signed URLs give controlled access.
OCR	Google Cloud Vision, AWS Textract, or Azure Document Intelligence	Managed OCR handles Indian UPI and banking screenshots better than a self-hosted engine, with no model maintenance.
Authentication	JWT with refresh tokens, or a managed identity provider	Supports role-based routing and server-side enforcement.
Background Jobs	A scheduler / queue (BullMQ, Celery, or cron-based worker)	Required for the 15-day countdown, reminder schedule and ageing escalations.
Email	Transactional email service (SendGrid / Amazon SES)	Reliable delivery of reminders, digests and password resets.
WhatsApp (optional)	WhatsApp Business API via an approved provider	Only if learner-facing reminders on WhatsApp are approved — see Section 17.
Hosting	Cloud VM or managed container platform, India region	Keeps learner data in-country and latency low.
Reporting / Export	Server-side Excel and PDF generation	Exports must reflect applied filters exactly.
Secrets	Environment variables or a managed secrets vault	Required by FR-SEC-12 — no credentials in source control.
Security Scanning	Dependency scanning in CI, plus antivirus scanning on uploads	Required by FR-SEC-23 and FR-SEC-32.

14.1 Indicative API Modules

Module	Representative Endpoints
Auth	login, logout, refresh, forgot-password, reset-password, verify-otp, me
Users	list, create, update, deactivate, assign-role
Leads	list (scoped by role), create, get, update, update-status, check-duplicate

Module	Representative Endpoints
Enrollment	set-course-plan, calculate-fee, request-concession, approve-concession, lock-fee
Payment Draft	generate, get-versions, download-pdf, send-email
Payments	create, update, upload-proof, ocr-extract, submit-for-audit, resubmit, list
Audit (L1)	queue, get-record, approve, request-correction, reject, bulk-approve, history
Finance	statement, customer-data, collection-summary, outstanding, holding-payments, followup-payments, export
Pricing Master	list, create, update, deactivate, effective-rate
Notifications	list, mark-read, preferences, digest-settings
Operations	validate-handover, send-handover, auto-transfer (job)
Audit Trail	search, entity-history, export
Reconciliation	daily-check, exceptions, month-end-statement, orphan-report, balance-trace
Super Admin	system-overview, workflow-health, reverse-audit, unlock-fee, reassign-lead, override-concession, extend-deadline, delegated-audit, activity-log

15. Recommended Delivery Phases

Phase	Scope	Outcome
Phase 1 – Essential (Foundation)	Full security baseline (Section 12) and core payment-integrity controls (FR-REC-01 to FR-REC-10); authentication, two-step verification and role-based logins including the Super Admin; Super Admin cross-dashboard visibility and user management; Sales Dashboard; lead creation; basic details; course and plan selection; pricing engine including combo logic; payment draft generator; payment tracking with screenshot upload and Transaction ID; Data Management audit queue with the five audit statuses and mandatory reasons; Finance Dashboard with approved payment statement and complete customer data.	The three-stage workflow works end to end. Sales stops re-typing, Nandhiya audits in one place, Rajesh sees approved payments without asking anyone.
Phase 2 – Automation	Automated reconciliation checks and exception reporting (FR-REC-11 to FR-REC-18); OCR extraction with confirm-before-submit; payment reminders; 15-day tracking and countdown; automatic Operations transfer on Day 15; full notification engine; payment-status automation; Operations handover validation and consolidated record; separate payment-type dashboards; resubmission cycle.	The manual chasing disappears. Deadlines enforce themselves and screenshots stop being typed out by hand.
Phase 3 – Management	Super Admin override suite, activity log and override summary; Pricing Master and configuration console; concession approval workflow; salesperson performance dashboards; monthly collection summary and GST view; outstanding balance report; complete audit history UI and exports; payment and revenue analytics.	Management gets control and visibility. Pricing changes need no developer, and every number is traceable.

Recommendation: do not attempt to release Phase 1 without the full Sales → Nandhiya → Rajesh chain. A partial release that covers only Sales would leave the team working in two systems at once, which is worse than the current process. The chain is the product.

15.1 Acceptance Criteria for Phase 1 Sign-off

- All four salespeople, the Sales Manager, Nandhiya, Rajesh and the Super Admin can log in individually and see only their permitted data.
- A lead can be taken from creation to a generated payment draft without any manual fee calculation, including a Combo Pack single-shot and double-shot case for both Advanced and Premium.
- A payment with a screenshot and Transaction ID can be submitted and appears in Nandhiya's queue as Pending Audit.
- Nandhiya can approve, request correction with a mandatory reason, and reject with a mandatory reason; the salesperson receives each outcome.
- An approved payment appears on Rajesh's Finance Dashboard with the complete payment statement, and a non-approved payment does not.

11. The complete customer data sheet is populated automatically and exports to Excel.
12. The audit history for a payment shows submitter, editor, auditor, decisions, reasons and field-level before/after values.
13. The Super Admin can see all three dashboards, reverse an approved payment with a reason, and is blocked from directly editing a payment amount or Transaction ID; Rajesh receives the override notification.
14. A duplicate Transaction ID is rejected at database level, an over-collection is blocked, and the daily reconciliation check runs clean across all test enrollments.
15. An independent security review or penetration test has been completed and its findings closed (FR-SEC-33).
16. A full database and payment-proof restore has been tested successfully from backup (FR-SEC-37).
17. All 30 business rules in Section 9 pass their test cases.

16. Assumptions, Dependencies and Risks

16.1 Assumptions

#	Assumption
A-01	Payments are collected outside the system (UPI / bank transfer) and evidenced by screenshot — the platform records and verifies them, it does not process them.
A-02	All prices stated in Section 5.4 are inclusive of 18% GST, as per the current brochure.
A-03	The Sales team consists of four members; the design supports adding more without redevelopment.
A-04	Nandhiya is the sole L1 auditor. The Super Admin acts as the delegated backup auditor during her absence (FR-SA-13), so no separate backup credential is required.
A-05	Rajesh requires review and reconciliation only, not the ability to edit payment data.
A-06	The Operations team receives the handover record; deeper Operations workflows are handled outside this system in Phase 1.
A-07	Company bank details shared in the payment draft are a single set, maintained by the Administrator.
A-08	Learners share payment proof through the salesperson; learners do not log in to this system.
A-09	The Super Admin is a single nominated person outside Sales, Data Management and Finance, so that the individual running the system is not the individual reviewing the money.

16.2 Dependencies

#	Dependency
D-01	Confirmed, signed-off Pricing Master data for every program, plan and combo combination before Phase 1 UAT.
D-02	Approved payment-draft wording and current company bank / payment details.
D-03	A selected OCR provider with an active account and quota.
D-04	A transactional email domain with correct SPF/DKIM configuration.
D-05	A hosting decision (cloud or ProITbridge-owned server) and the corresponding server, storage, TLS certificate and backup provisioning — see Q-11.
D-06	Nomination of the Sales Manager user and of the single Super Admin, plus a documented break-glass procedure for the backup Super Admin credential.
D-07	If WhatsApp reminders are in scope, an approved WhatsApp Business API account and message templates.
D-08	A named owner for security operations — backups, patching, credential custody and access review — before go-live.
D-09	A booked independent security review or penetration test slot ahead of go-live (FR-SEC-33).

16.3 Key Risks

#	Risk	Mitigation
R-01	OCR misreads amounts or Transaction IDs from low-quality screenshots.	Mandatory human confirmation before submission (FR-SAL-40); confidence flags; Nandhiya's L1 audit as the second check.
R-02	Nandhiya becomes a bottleneck; payments sit unaudited and Rajesh's month-end view is incomplete.	Ageing escalation tiles (FR-DM-26); bulk approve for clean records; Super Admin delegated audit (FR-SA-13).
R-03	Sales team continues working over WhatsApp in parallel, so the system holds partial data.	Make the payment draft generator genuinely faster than typing it manually; make Operations handover possible only from the system.
R-04	Pricing changes are applied inconsistently mid-cycle.	Effective-dated Pricing Master and fee-lock on draft generation (FR-SAL-23, FR-ADM-02).
R-05	Duplicate leads created across salespeople, causing ownership disputes.	Duplicate detection on mobile and email at creation (FR-SAL-10).
R-06	Personal learner data and payment proofs exposed.	Private storage with signed URLs, server-side RBAC, export logging (NFR-06, NFR-07, FR-AUD-05).
R-08	The Super Admin account is misused or compromised — it is the most powerful account in the system.	No direct edit of financial fields (FR-SA-08); no delete rights (FR-SA-14); mandatory 2FA (NFR-07a); every override reasoned, logged and notified to Rajesh (FR-SA-16 to FR-SA-20).

17. Open Points Requiring a Decision

The following need a business decision before or during Phase 1 build. None of them block starting; all of them will slow the build if left open past design sign-off.

#	Open Point	Owner
Q-01	Should learner-facing reminders go out over WhatsApp, or only to the salesperson (who then messages the learner)? WhatsApp Business API adds cost, template approval and lead time.	Rajesh / Sales Manager
Q-02	What is the concession approval threshold, per plan, above which manager approval is required?	Rajesh / Sales Manager
Q-03	Who is the nominated Sales Manager, and who is the single nominated Super Admin? Both must be named before Phase 1 UAT.	Rajesh
Q-04	For the Combo Pack, what is the exact payment split for Double Shot (two equal instalments, or a defined ratio)? And for a three-payment cycle, what proportion is expected at each stage?	Sales Team
Q-05	What is the default payment schedule the draft should propose when no special arrangement applies?	Sales Team
Q-06	Should refunds and cancellations be handled in the system, and if so with what approval chain? (Currently out of scope — recommended for Phase 3.)	Rajesh
Q-07	Is a formal GST invoice required per payment, and if so should the system generate it or is that handled in existing accounting software?	Rajesh / Finance
Q-08	Should historical enrollments and payments be migrated into the system at go-live, and if so from what date?	Rajesh / Nandhiya
Q-09	Is Nandhiya expected to audit a lead's basic details (name, address, program) as well as its payment, or payment data only?	Nandhiya
Q-10	What is the expected audit turnaround SLA that should drive the "pending for a long period" escalation? (Default assumed: 48 hours.)	Nandhiya / Rajesh
Q-11	Will the application and database run on cloud infrastructure or on a ProITbridge-owned server? This decides who carries backup, patching, uptime and physical security duties (FR-SEC-39), and is needed before infrastructure work starts.	Rajesh / IT
Q-12	Who is the named owner for security operations — backups, patching, credential custody and the six-monthly access review?	Rajesh
Q-13	Should a month be lockable once reconciled, so no record in a closed period can change without a Super Admin reopen? Not currently specified; it would strengthen the year-end position.	Rajesh

18. Requirement Traceability

Every requirement in the source documents is mapped below to the section and requirement IDs that satisfy it. Nothing from the three inputs has been dropped.

Source	Original Requirement	Covered By
Sales PDF §2	Sales dashboard, four users, management view	FR-SAL-01 to FR-SAL-06
Sales PDF §3	Basic details form and validation message	FR-SAL-08, FR-SAL-09
Sales PDF §4	Course and plan selection	FR-SAL-14, FR-SAL-15
Sales PDF §5	Standard brochure pricing	Section 5.4.1, FR-SAL-20
Sales PDF §6	Combo pack pricing and auto-calculation	Section 5.4.2, FR-SAL-21
Sales PDF §7	Special leads, concessions, flexible payments	FR-SAL-25 to FR-SAL-31
Sales PDF §8–9	Payment structure, course not started / started	Section 3.3, BR-07 to BR-09
Sales PDF §10	15-day payment automation	FR-SAL-49 to FR-SAL-57
Sales PDF §11	Payment tracking fields	Section 5.7, FR-SAL-38 to FR-SAL-48
Sales PDF §12	Automatic payment draft generator	FR-SAL-32 to FR-SAL-37
Sales PDF §13	Commencing date selector	FR-SAL-17
Sales PDF §14	Lead and payment status pipeline	Section 3.4
Sales PDF §15	Notifications and follow-ups	FR-SAL-58 to FR-SAL-66
Sales PDF §16–17	Operations handover and validation	FR-SAL-67 to FR-SAL-71
Sales PDF §18	Pricing Master admin control	Section 8.1, FR-ADM-01 to FR-ADM-04
Sales PDF §19	Audit trail	Section 8.2, FR-AUD-01 to FR-AUD-05
Sales PDF §20	Thirteen business rules	Section 9 (BR-01 to BR-14)
Sales PDF §21	Development phases	Section 13
Sales PDF §22	End-to-end workflow, not a form tool	Section 3, Section 13 note

Source	Original Requirement	Covered By
Data Mgmt §1	Payment data received from Sales with all listed fields	FR-DM-01 to FR-DM-08
Data Mgmt §2	Separate payment-type dashboards	FR-DM-09 to FR-DM-13
Data Mgmt §3	Payment-level audit status with five states and mandatory comments	FR-DM-14 to FR-DM-23
Data Mgmt §5	Data management dashboard overview	FR-DM-24 to FR-DM-29
Data Mgmt §6	Complete audit history	FR-DM-30 to FR-DM-45
Rajesh §1	Daily payment records available once approved by Nandhiya	FR-FIN-01 to FR-FIN-10
Rajesh §2	Complete customer data — name, mobile, email, address, program	FR-FIN-11 to FR-FIN-18
Rajesh §3	Course-holding and follow-up payment records, monthly view	FR-FIN-19 to FR-FIN-26
Rajesh (verbal)	Three separate dashboards with separate logins and a two-level approval chain	Section 2, Section 3, FR-AUTH-01 to FR-AUTH-03
Rajesh (verbal)	Sales drops the screenshot and the system pulls the details	FR-SAL-39 to FR-SAL-42, FR-SAL-47
Rajesh (verbal)	One Super Admin above all three dashboards	Section 2.1 role 5, Section 2.2, Section 8.1, FR-SA-01 to FR-SA-20, FR-AUTH-11, BR-23 to BR-26
Rajesh (verbal)	Internal ProITbridge tool; data and the database connection must be secure	Section 12 in full, FR-SEC-01 to FR-SEC-46, NFR-05 to NFR-09
Rajesh (verbal)	Large payment volume — figures must tally with no issues	Section 13, FR-REC-01 to FR-REC-18, BR-27 to BR-30
Rajesh (verbal)	Two-step verification protects the payments	Section 3.2, FR-DM-14 to FR-DM-23, FR-REC-02, FR-SEC-05

19. Sign-off

By signing below, each stakeholder confirms that the requirements captured in this document accurately and completely represent their needs for the ProlTbridge Payment & Enrollment Automation Platform.

Name	Role	Signature	Date
Rajesh	Finance — Requirement Owner		
Nandhiya	Data Management — Requirement Owner		
	Sales Manager		
	Super Admin (nominated owner)		
	Security Operations Owner		
	Development / Automation Lead		

Document version 1.2 — prepared 11 August 2026. Circulate for review; record all changes in a version history table before build sign-off.
